Adding Fractions

$$1) \quad \frac{3}{10} + \frac{1}{2} + \frac{3}{5} = \frac{3}{10} + \frac{5}{10} + \frac{6}{10} = \frac{14}{10} = \frac{7}{5} = 1\frac{2}{5}$$

$$2) \quad \frac{1}{2} + \frac{2}{3} + \frac{3}{4} = \frac{6}{12} + \frac{8}{12} + \frac{9}{12} = \frac{23}{12} = 1\frac{11}{12}$$

$$3) \quad \frac{1}{3} + \frac{1}{4} + \frac{9}{10} = \frac{20}{60} + \frac{15}{60} + \frac{54}{60} = \frac{89}{60} = 1\frac{29}{60}$$

$$4) \quad \frac{6}{10} + \frac{2}{4} + \frac{1}{2} = \frac{12}{20} + \frac{10}{20} + \frac{10}{20} = \frac{32}{20} = \frac{8}{5} = 1\frac{3}{5}$$

$$5) \quad \frac{2}{5} + \frac{1}{2} + \frac{3}{10} = \frac{4}{10} + \frac{5}{10} + \frac{3}{10} = \frac{12}{10} = \frac{6}{5} = 1\frac{1}{5}$$

$$6) \quad \frac{1}{3} + \frac{1}{2} + \frac{2}{4} = \frac{4}{12} + \frac{6}{12} + \frac{6}{12} = \frac{16}{12} = \frac{4}{3} = 1\frac{1}{3}$$

$$7) \quad \frac{1}{4} + \frac{1}{3} + \frac{6}{10} = \frac{15}{60} + \frac{20}{60} + \frac{36}{60} = \frac{71}{60} = 1\frac{11}{60}$$

$$8) \quad \frac{2}{5} + \frac{1}{3} + \frac{6}{10} = \frac{12}{30} + \frac{10}{30} + \frac{18}{30} = \frac{40}{30} = \frac{4}{3} = 1\frac{1}{3}$$

$$9) \quad \frac{2}{3} + \frac{7}{10} + \frac{2}{5} = \frac{20}{30} + \frac{21}{30} + \frac{12}{30} = \frac{53}{30} = 1\frac{23}{30}$$

$$10) \quad \frac{1}{3} + \frac{4}{5} + \frac{1}{2} = \frac{10}{30} + \frac{24}{30} + \frac{15}{30} = \frac{49}{30} = 1\frac{19}{30}$$
