An Amazing
Fact a Day

Scientists believe that the Earth used to have planetary rings much like Saturn's until the debris clumped together to eventually form the Moon.

You could try to find out:

- what planetary rings are made from;
- which planets in the Solar System have them;
- what might happen to the Moon when the Sun becomes a red supergiant;
- what Roche's Law is.

Find the following space vocabulary in the word search below.
